

Show more button

Reveals more content.

[Overview](#)

[Specs](#)

[Guidelines](#)

Usage

Use the show more button to prevent overwhelming users with too much content at once. It can be used multiple times. For example:

- The first click might reveal 6 additional pieces of information.
- A second click could reveal another 6 pieces.

The amount of content revealed each time can vary based on the specific use case.

Content, accessibility & SEO

Content

- **Progressive Disclosure:** Ensure the initial set of cards provides enough context and value without overwhelming the user. The Show more button should clearly indicate what will happen
- **Consistent Grouping:** Reveal content in logical batches (e.g., 6 cards at a time) to maintain predictability.
- **Avoid Duplication:** Ensure newly revealed content does not repeat what's already visible.
- **Loading Feedback:** If content loads asynchronously, provide a loading indicator or skeleton state for clarity.

Accessibility

- **Keyboard Navigation:** The Show more button is focusable and operable via keyboard (e.g., **Enter** or **Space**).
- **Screen Reader Clarity:** Label the button descriptively (e.g., "Show 6 more articles" instead of just "Show more").

SEO

- **Avoid Infinite Scroll Pitfalls:** If Show more replaces pagination, implement structured data and ensure unique URLs or query parameters for each state so search engines can index all content.

Do's and Don'ts

+ Show more	Show more +
⊗ Don't Don't change the icon.	⊗ Don't Don't move the position of the icon.
