An avatar visually represents a user, group, or entity. It uses a profile image, icon, or initials to create a recognizable identity. Avatars help personalize the experience, improve recognition, and make it easier to identify individuals or accounts in contexts such as messaging, notifications, and user profiles.

## Anatomy

- Light mode
- Dark mode

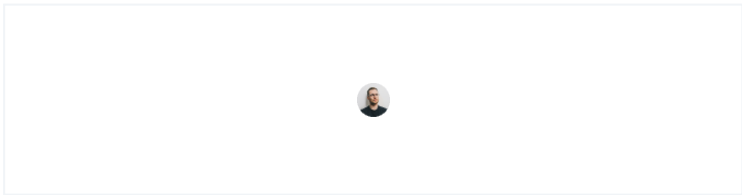

1. **Avatar container:** Represent the user or company with an image or initials.
2. **Status indicator** (optional): Displays the current [status](#) of the user.

## Variants

The avatar is available in three variants.

- **Photographic** avatars display a user’s profile image. Automatically switches to initials if the image cannot load.
- Avatars with **Initials** show the first and last name initials of the account when no profile image is provided. Limit to two characters for clarity and use the [provided background colors](#).
- The **Brand** variant is used to represent an organization or group rather than an individual.
