Notifications inform users about important updates, actions, or events within a product. They can:

- Provide critical information, such as errors or warnings.
- Confirm successful actions.
- Alert users to new content or tasks requiring attention.

Notifications are categorized by priority (**informational**, **warning**, **error**) and appear in different formats such as banners or modals, based on urgency and context.

Variants

Category

Notifications are available in three categories: warning, positive and informative.

Warning

A service disruption has been detected. Some functions may be limited or unavailable, and our team is actively working to restore full service as quickly as possible.

Label

Label

Warning notification.

Positive

Deployment finished successfully, and the new version is now live across all services. All features should be fully operational, and you can start exploring the latest improvements right away.

Label

Label

Positive notification.

i Information

Planned maintenance is scheduled for this weekend. While we don't expect any downtime, you may notice minor slowdowns or brief interruptions as updates are applied.

Information notification.

With or without buttons

Notifications can be displayed with or without buttons. The choice impacts user experience and should align with the importance and urgency of the message.

The variants without a button cannot be dismissed by the user.

i Warning

A service disruption has been detected. Some functions may be limited or unavailable, and our team is actively working to restore full service as quickly as possible.

No CTA

Use when the message is purely informational and no user action is required. For example for urgent alerts where the only goal is to keep the user informed until resolved.

Notification without buttons.

i Warning

A service disruption has been detected. Some functions may be limited or unavailable, and our team is actively working to restore full service as quickly as possible.

Single CTA

Encourages interaction without overwhelming the user.

Notification with only a primary button.

i Warning

A service disruption has been detected. Some functions may be limited or unavailable, and our team is actively working to restore full service as quickly as possible.

Multiple CTAs

Useful when additional details or actions are available.

Notification with a primary and a secondary button.
