Variants

Buttons are available in different variants to support various background types and levels of visual emphasis.

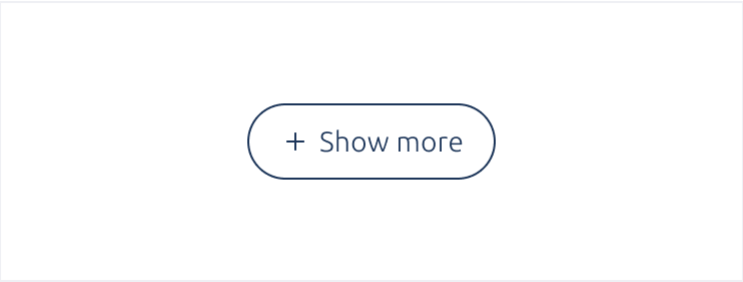

There are three background-based variants:

- onLight** – for light backgrounds
- onHeavy** – for dark or high-contrast backgrounds
- onPhoto** – for photographic or complex imagery backgrounds

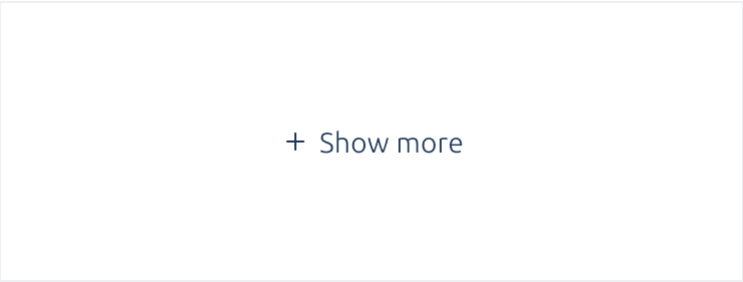

For guidance on when to use which background variant, refer to the [Lite and Heavy](#) section on the Color page.

Each variant comes in Secondary and Tertiary emphasis levels. The **onPhoto** variant does **not** include a Tertiary option due to accessibility and contrast requirements.

onLite

Behavior

The Show more button reveals additional content when clicked. It displays hidden content without navigating away from the current page, allowing users to access more information in a seamless and intuitive way.

How many new items are revealed after clicking will be decided in each respective composition.
