Figma component	 Open in Figma
Status	Healthy

System buttons are designed for building complex systems or digital products. Do not use them for regular web pages.

Use a system warning button for actions that may have serious consequences, like deleting data, canceling an account, or making irreversible changes. The warning button comes with a predefined warning icon which should not be changed. These buttons should always be followed by a user confirmation before completing the action.

Variants

System warning buttons have a primary and secondary variant.
