Figma component	 Open in Figma
Status	Healthy

Warning buttons are for actions that may have serious consequences, like deleting data, canceling an account, or making irreversible changes. The warning button comes with a predefined warning icon which should not be changed or removed.

Warning buttons always require confirmation from the user before completing the action.

Anatomy

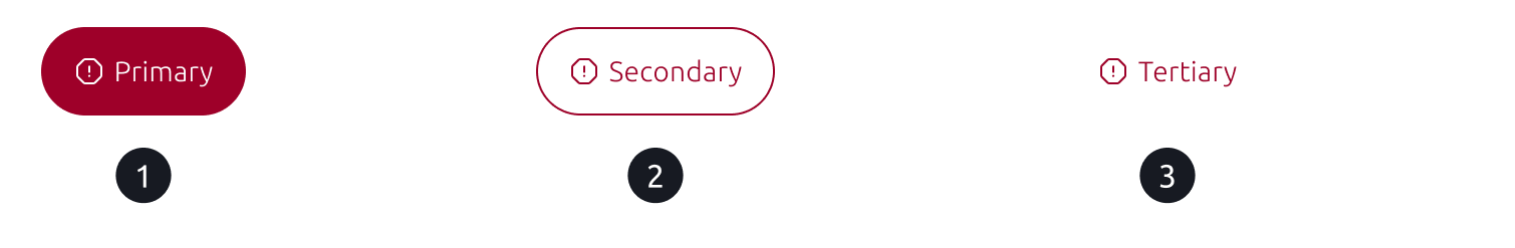

The button exists with and without an icon.

- 1. **Container:** Houses the content and helps represent the hierarchy and state of the button.
- 2. **Warning icon.**
- 3. **Label:** Informs what action the button does.

Variants

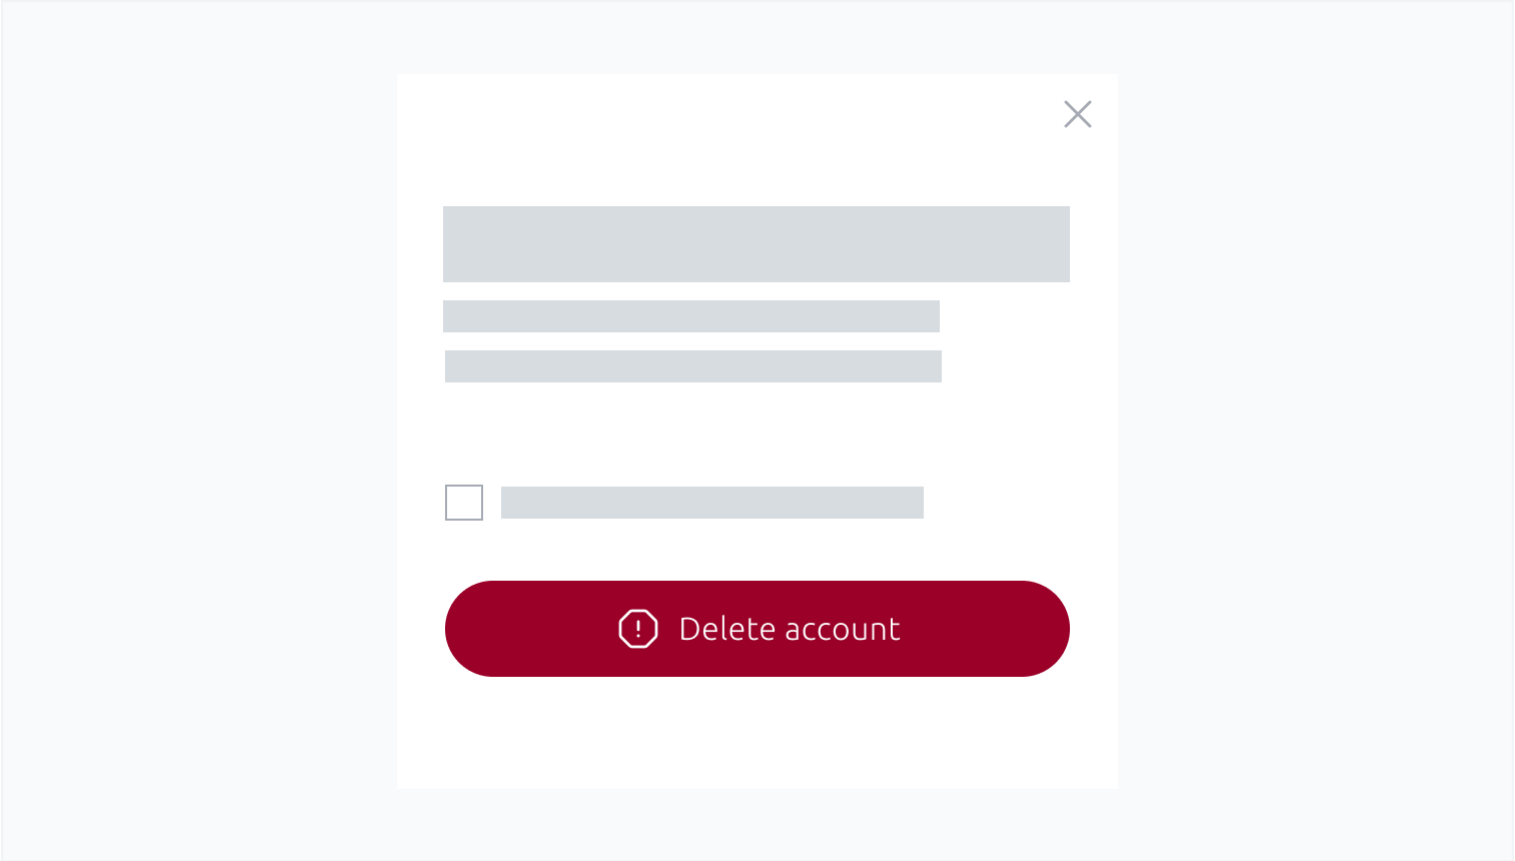

Buttons have three variants: primary, secondary and tertiary. To guide users to the main action, use a clear [button hierarchy](#).

- 1. Primary button
- 2. Secondary button
- 3. Tertiary button

Full-width button

Full-width buttons span the entire width of their container. These buttons offer high visibility and are easy to interact with, making them ideal for mobile layouts and fixed-width panels. Its label may change upon interaction, but the button’s width should always remain constant.
