

Color

Distinguish our brand and reinforce a consistent visual identity.

- [Introduction](#)
- [Accessibility](#)
- [Semantic colors](#)
- [Primitive colors](#)

Primitive color tokens encapsulate raw hex codes and are **not** designed to be applied directly. Instead, use semantic colors, which are defined based on context and purpose.

If you ever need to reference a primitive token, consult the [Visual Identity Guidelines](#) to make sure it’s applied correctly.

Brand colors

Within these color tints, two swatches represent our core brand identity:

- CapgeminiBlue-500 is our primary brand color, also known as *Capgemini Blue*.
- CapgeminiBlue-900 serves as our secondary brand color, also known as *Capgemini Dark Blue*.

CapgeminiBlue

Accent colors

These colors are not part of Capgemini’s core brand palette. They were created specifically for digital interfaces to ensure proper contrast, accessibility, and clarity. Their purpose is functional rather than expressive: they communicate system states such as success, warning, attention, and error in a way that is universally recognizable.

For that reason, these state colors sit within the design system rather than the brand book. They serve a different function, operate under different constraints, and support the user interface instead of shaping brand expression. Although they contribute to the overall digital experience, they are not considered part of the brand’s official color palette.

The [additional colors provided in Capgemini’s brand book](#) are intended primarily for print and presentation materials.
