Lite and heavy

Learn how lite and heavy colors - and their corresponding onLite and onHeavy components - work together to ensure visual clarity and accessibility across different backgrounds.

Tip: Hover over the link icon in a color swatch to see which primitive token the semantic color references.

Surface decorative

These colors are intended to be used only for small decorative surfaces, without any text placed on top of them. Text over these colors may not meet contrast requirements, which could negatively impact legibility and accessibility. Decorative surfaces should serve as accents or visual highlights rather than functional backgrounds for content.
