Usage

Zodiak provides a range of typography sizes to support a clear visual hierarchy across components and pages. Instead of assigning fixed sizes to semantic tags like `<h1>` or `<h2>`, we use **t-shirt sizing** (e.g., S, M, L) to define text styles.

Designers select the appropriate size based on visual hierarchy and design context, rather than semantic structure. For example, a headline on a landing page may use a larger size than a headline in a modal, even if both serve similar semantic roles.

T-shirt sizes

Each size is available in 300 and 400 weight.
