

Sizing

Ensure consistent sizing of components.

Most Zodiac components have predefined sizes which should not be changed, but in certain cases these tokens can be used to define the width and height of a component. Size tokens are used whenever possible to ensure consistent sizing throughout the design.

Primitives

These primitive tokens are based on an 8 pixel base unit.

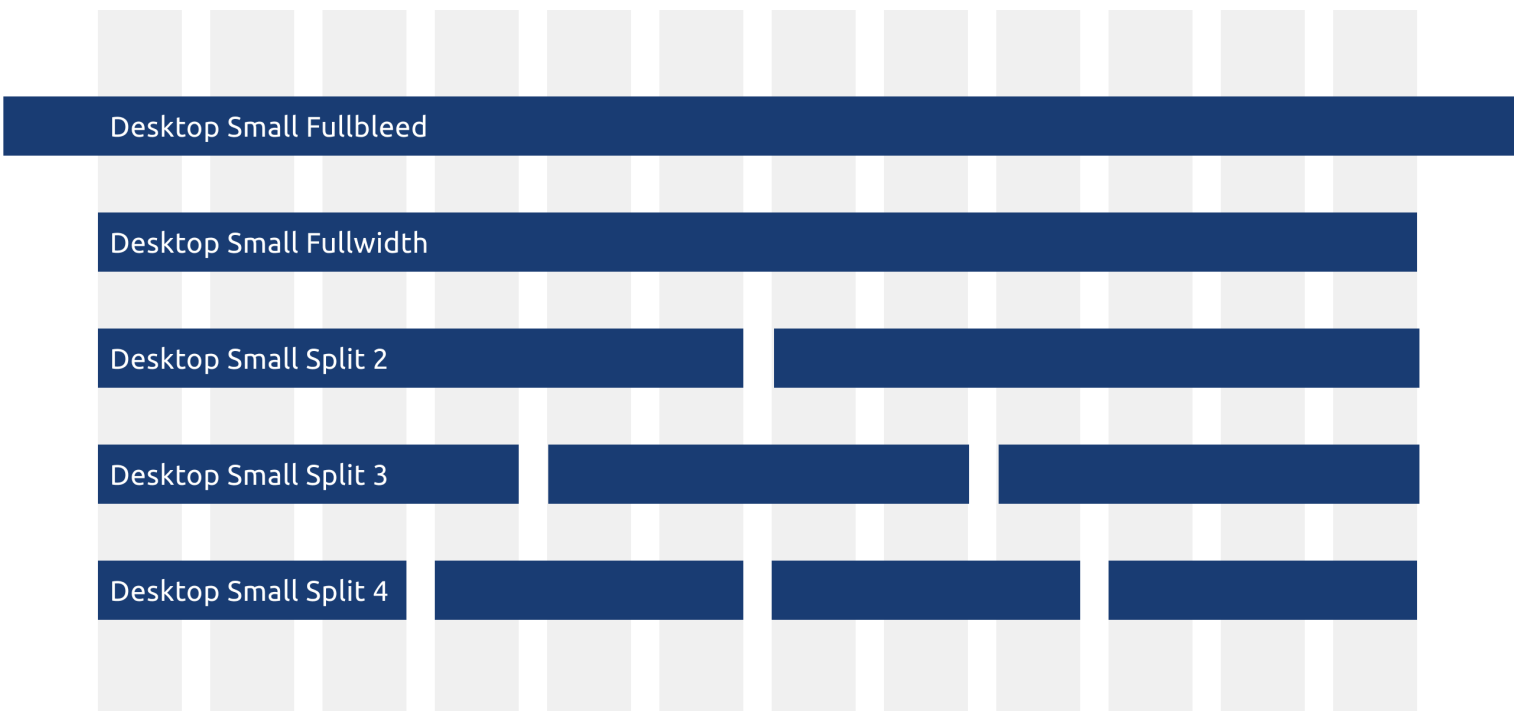

Token name	Value
2XS	8px
XS	16px
S	24px
M	32px
L	48px
XL	56px
2XL	72px
3XL	128px
4XL	160px
5XL	200PX
6XL	320px
7XL	480px
8XL	640px

Token name	Value
9XL	720px
10XL	880px
11XL	960px
12XL	1040px

Grid adjusted sizes

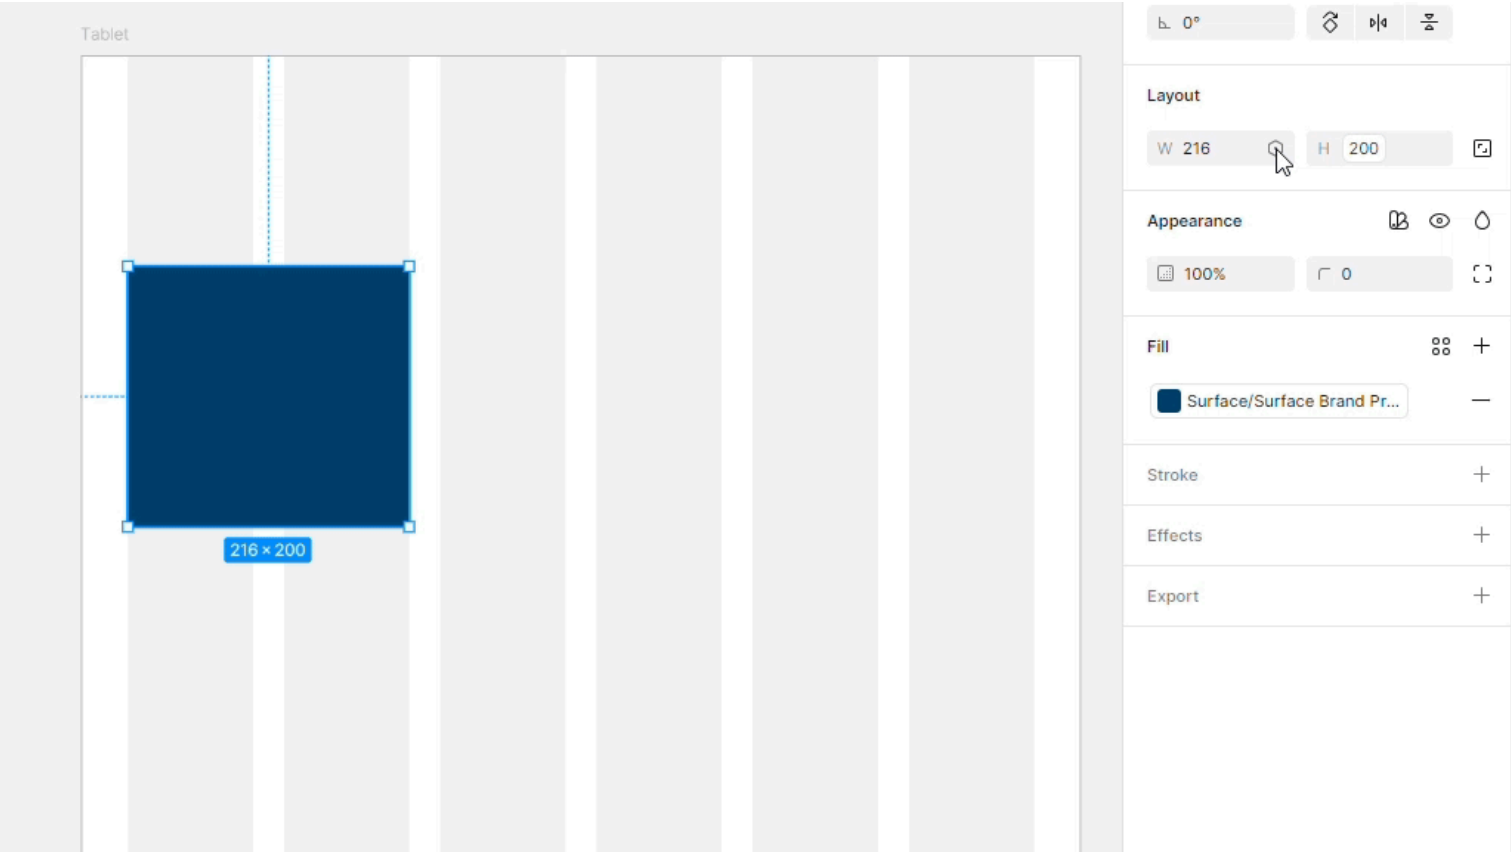

In addition to the primitive size tokens, we offer specific sizes that adhere to the grid for desktop, tablet, and mobile layouts. These tokens ensure that components fit seamlessly within the grid structure.

Device	Fullbleed	Fullwidth	Split 2	Split 3	Split 4
Desktop	1920px	1296px	636px	416px	306px
Desktop small	1280px	1116px	546px	356px	261px
Tablet	768px	696px	336px	216px	
Mobile	360px	312px	148px		

Applying sizes in Figma

When defining the width of a component in Figma, simply apply a variable instead of typing the value.
